Problem – Solution Fit Template

Date	21 FEB 2026
Team ID	LTVIP2026TMIDS34438
Project Name	ToyCraft Tales: Tableau's Vision into Toy Manufacturer Data
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ Understand the existing situation in order to improve it for your target group.

Template:

Purpose / Vision

1. CUSTOMER SEGMENT(S) (Who are we solving for?) Use existing segments or 3-5 new ones. Sales managers and data analysts in toy manufacturing companies	2. JOBS-TO-BE-DONE (PROBLEMS) Which jobs do our customers consistently encounter for your segment? There could be more than one, analyze 3-5 most critical. Understand toy sales, manage inventory, and make better business decisions using data	3. CUSTOMER CONSTRAINTS (What constraints do your customers have? What factors or forces limit their options or decisions?) - ie. existing pains, budget, no-tech, network, connections, possible benefits Lack of time, limited data skills, small budgets, and complex tools
4. TRIGGERS What triggers customers to act? i.e. meeting, email, social media, etc. Drop in sales, stock piling up, or launching new toys makes them look for better data tools	5. PROBLEM-ROOT CAUSE What is the main reason that this problem exists? What is the best way to solve this problem? They don't have one easy tool to see all toy data clearly and quickly	6. AVAILABLE SOLUTIONS What solutions are available to customers when they face the problem or need to get the job done? What have they tried in the past? What would it cost to solve the problem? - ie. price, time, effort, etc. Excel sheets and ERP tools, but they're slow and hard to understand
7. EMOTIONS BEFORE / AFTER How do customers feel before and after using your solution? Before: Stressed and unsure. After: Clear, confident, and in control	8. TO YOUR SOLUTION If you are working on an existing business, write down your current solution. If not, write down the problem you are solving. If you are working on a new business, write down the problem you are solving. The solution and current solution should be the same customer problem. Write a problem and solution statement and launch. A Tableau dashboard that shows toy sales, stock, and trends in a simple, visual way	9. CHANNELS of BEHAVIOUR What channels do customers use to interact with your solution? Check dashboards, share reports online
10. BEHAVIOUR What does your customer do to solve the problem or get the job done? i.e. already solved, but the right way, great results, information, design, etc. They use Excel, ask for help with charts, or guess based on past data	11. CHANNLES of BEHAVIOUR What channels do customers use to interact with your solution? Discuss in meetings, write notes, talk to teams	12. CHANNLES of BEHAVIOUR What channels do customers use to interact with your solution?
